

Sustainability consulting with SAP Product Footprint Management

Achieve continuous sustainability improvements in end-to-end supply chains

Sustainability is a crucial factor in supply chains. Around the world, regulations will require businesses to report on their environmental footprints, and some government administrations are already implementing environmental taxes.

4flow's approach enables continuous supply chain optimization for sustainability by considering factors such as carbon emissions and water consumption across product lifecycles.

Key reasons for supply chain sustainability transformation

Government regulations and compliance

Regulations and upcoming Extended Producer Responsibility (EPR) schemes and plastic taxes

Customer and investor expectations

Big shift in consumer behavior in favor of sustainable products and services, and in investor expectations for sustainable business models

Mandatory reporting

Corporate Sustainability Reporting Directive (CSRD) to become mandatory and binding for businesses in the EU

Competitive advantage in the market

Environmental, social, and governance (ESG) KPIs define how businesses can move faster than their competition

Benefits for 4flow customers

4flow consulting with SAP Product Footprint Management

Transparency and traceability

Track carbon footprint for the supply chain network and product lifecycle

Optimization

Reduce footprint with optimized network, transportation and factory design

Analytics and insights

Measure, monitor and visualize footprint KPIs for greater sustainability

Stakeholder fit

Provide KPIs for diverse roles, including CSCOs, compliance, accounting and more

Reporting

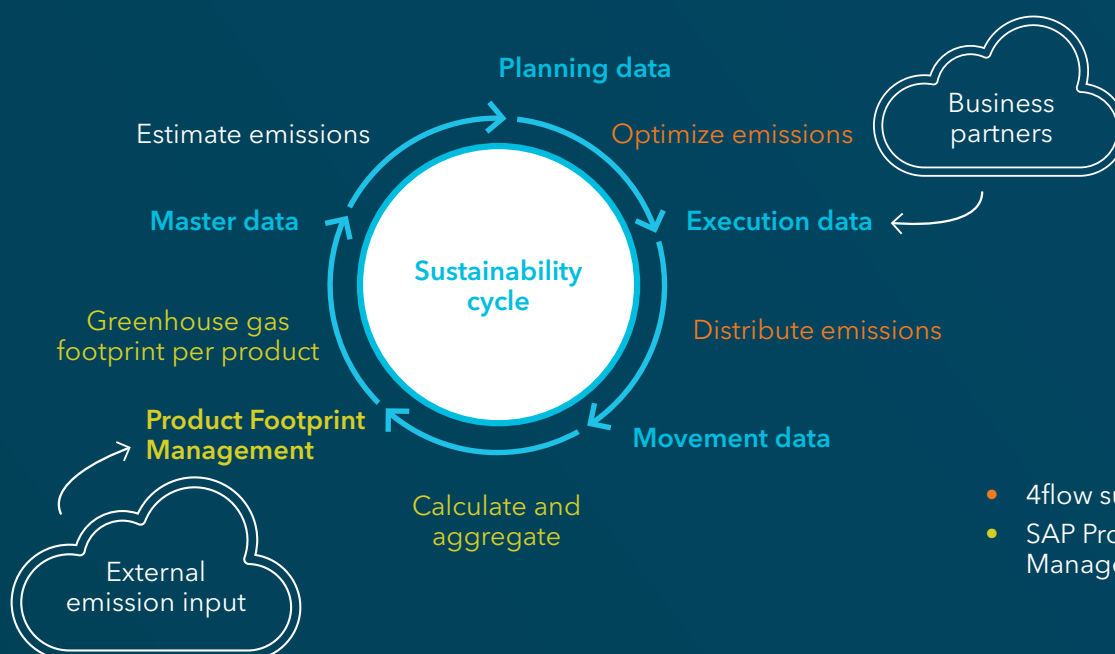

Prepare for government or corporate reporting and support product reliability

Process chain integration

Distribute footprint data across end-to-end supply chain process and partner network

Enable iterative improvements for even greater sustainability
