

Warehouse management with SAP

Leveraging SAP EWM end-to-end warehouse capabilities and automation

As warehouses grow more complex, optimizing end-to-end distribution and fulfillment processes is key. 4flow supports the transformation to SAP Extended Warehouse Management (EWM), a comprehensive warehouse management system that enables businesses to operate both manual and automated warehouse operations.

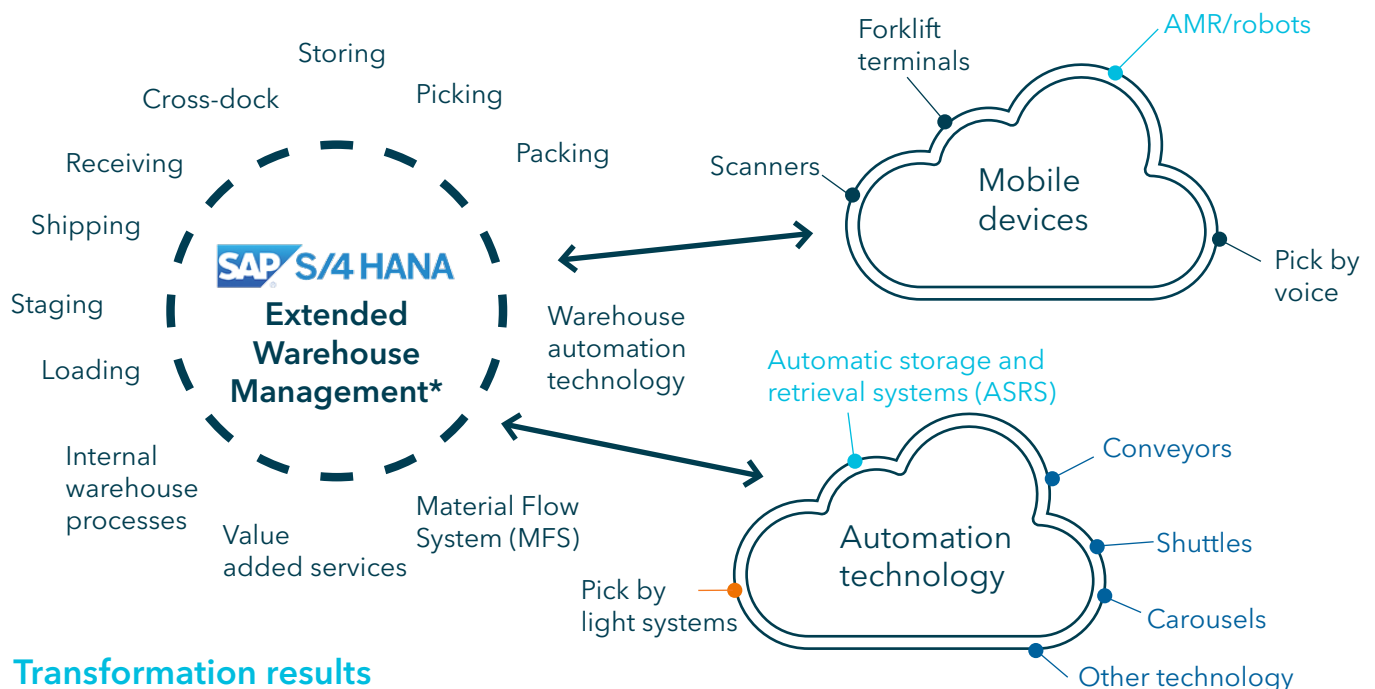

With SAP EWM MFS (Material Flow System) connectivity, automation technology enables businesses to gain efficiencies

and alleviate typical warehouse issues like labor shortages, delivery deadlines and cost pressure.

4flow helps customers implement next-level process and warehouse automation, connected partner collaboration and real-time visibility on the shopfloor.

4flow customers improve warehouse operations with SAP EWM solutions, which are integrated into S/4HANA enterprise management.

4flow adds value by digitally transforming your warehouse processes

Transformation results

Cost savings in warehouse operations

Business productivity

End-to-end visibility over warehouse operations

Process standardization

Labor efficiencies

Warehouse management with SAP EWM

Benefits for 4flow customers

Customer centricity

Industry-specific solutions to match individual warehouse requirements and warehouse attributes

Digital partner

Guidance of warehouse digitization from strategy to implementation with state-of-the-art technology
